

Release Notes

Macintosh driver version 1.2.1-31

1. New Features

- a. The following new features were implemented in this release of the driver.

New Feature Summary
No updates.

2. Defect Fixes

- a. The following defects were the main defects reported by customers and were fixed in this release of the driver.

Defect Summary
Over-install function does not work.
Clicking a window using the pen cursor does not bring focus to the window.
When using the tilt function in Toonboom on a Mac computer with a M1 chip, the tilt angle of the simulated pen cursor does not match the tilt angle of the pen.
In Photoshop, triggering the shortcut of "Option + Control" set on the device will cause the cursor to freeze.
In Substance painter and Maya, shortcuts of "Command / Option + Right Click / Left Click" set on the device did not trigger the corresponding functions.
On the gradient panel in Adobe Illustrator, the pen cursor can not select a color with a single click.
When mapping to a 4K display, the pen cursor can not reach the bottom of the display.
When mapping to a 4K display, the pen cursor reaches the bottom of the display, but can not bring up the Dock bar.
When setting the Shift key function on the device and triggering that on the OS system, the multi-select function of the Shift key does not get triggered.

3. Known Issues

- a. The following are known issues in the driver and workaround if one exists.

Known Issue Summary	Workaround (if one exists)
No known serious issues at this time.
